HOTEL RESERVATION SYSTEM

We are doing our project in python programming language and we are using Pymysql database. Firstly we have decided database schema and we have been created the database which is called 'hotelproject'.

Then, we applied some database command to create our tables.

```
CREATE TABLE 'guests' (
```

'LoginID' int(11) NOT NULL AUTO INCREMENT,

'FName' text NOT NULL,

'LName' text NOT NULL,

'Email' text NOT NULL,

'Password' int(11) NOT NULL,

'Phone' int(11) NOT NULL,

'Address' text DEFAULT NULL,

PRIMARY KEY ('LoginID'))

ENGINE=InnoDB AUTO INCREMENT=29 DEFAULT CHARSET=utf8mb4

CREATE TABLE 'rooms' (

'Number' int(11) NOT NULL AUTO INCREMENT,

'Level' int(11) DEFAULT NULL,

'Style' text DEFAULT NULL,

'Beds' int(11) DEFAULT NULL,

'Smoking' tinyint(1) DEFAULT NULL,

'Counter' text DEFAULT NULL,

PRIMARY KEY ('Number'))

ENGINE=InnoDB AUTO_INCREMENT=20 DEFAULT CHARSET=utf8mb4

CREATE TABLE 'reservations' (

'GuestID' int(11) NOT NULL,

'RoomID' int(11) NOT NULL,

'ResNumber' int(11) NOT NULL AUTO INCREMENT,

'CheckIn' datetime DEFAULT NULL.

'CheckOut' datetime DEFAULT NULL,

PRIMARY KEY ('ResNumber'),

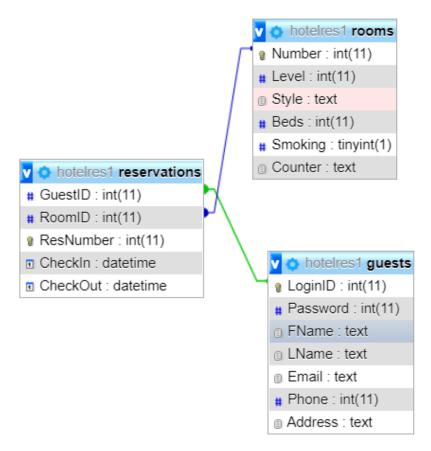

KEY 'GuestID' ('GuestID'),

KEY 'RoomID' ('RoomID'),

CONSTRAINT `reservations_ibfk_1` FOREIGN KEY (`GuestID`) REFERENCES `guests` (`LoginID`),

CONSTRAINT 'reservations_ibfk_3' FOREIGN KEY ('RoomID') REFERENCES 'rooms' ('Number'))

ENGINE=InnoDB AUTO INCREMENT=54 DEFAULT CHARSET=utf8mb4

Relationship (picture 1)

We added the data in our database. We used this sql command:

sqlQuery = "CREATE TABLE IF NOT EXISTS guests(LoginID INT PRIMARY KEY, Pass word INT NOT NULL, FName TEXT NOT NULL, LName TEXT NOT NULL, Email TEXT NOT NULL, Phone INT NOT NULL, Address TEXT)"

sqlQuery2 = "CREATE TABLE IF NOT EXISTS rooms(Number INT PRIMARY KEY, Level INT, Style TEXT, Beds INT, Smoking BOOLEAN)"

sqlQuery3 = "CREATE TABLE IF NOT EXISTS reservations(ResNumber INT PRIMARY
KEY, CheckIn DATETIME, CheckOut DATETIME, GuestID INT)"

cursor.execute(sqlQuery) cursor.execute(sqlQuery2) cursor.execute(sqlQuery3)

This sql command create table if there is no table as guests with entities. And also we have primary keys, we wrote here and also if there is something important we don't allow NULL, user has to input.

```
adding= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
              VALUES (1,'Suit',1,True,'Boş')"
  adding2= "INSERT INTO rooms (Level,Style,Beds,Smoking,Counter)
                            VALUES (2,'Suit',2,True,'Boş') "
  adding3= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (3,'Normal',3,True,'Boş')"
  adding4= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                                   VALUES (4,'Normal',3,False,'Boş')"
adding5= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (5,'Normal',3,False,'Bos')"
  adding6= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (11, 'Suit', 1, True, 'Boş')"
  adding7= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (12, 'Suit', 2, True, 'Boş')"
  adding8= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (13,'Normal',3,True,'Boş')"
  adding9= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (14,'Normal',3,False,'Boş')"
  adding10= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (15,'Normal',3,False,'Boş')"
  adding11= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (21,'Suit',1,True,'Boş')"
  adding12= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (22, 'Suit', 2, True, 'Boş')"
  adding13= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (23,'Normal',3,True,'Boş')"
  adding14= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (24,'Normal',3,False,'Bos')"
  adding15= "INSERT INTO rooms (Level, Style, Beds, Smoking, Counter)
                            VALUES (25,'Normal',3,False,'Boş')"
  cursor = connection.cursor()
  cursor.execute(adding)
  cursor.execute(adding2)
  cursor.execute(adding3)
  cursor.execute(adding4)
  cursor.execute(adding5)
  cursor.execute(adding6)
  cursor.execute(adding7)
  cursor.execute(adding8)
  cursor.execute(adding9)
  cursor.execute(adding10)
  cursor.execute(adding11)
```

cursor.execute(adding12) cursor.execute(adding13) cursor.execute(adding14) cursor.execute(adding15) On this part we add rooms on our database. Our rooms table has 6 entities. They are Number, Level, Style, Beds, Smooking, Counter. We use Auto Increment for number, have 15 rooms and there are 2 syle Suit and Normal. In some rooms smooking free but some rooms don't. And also we have a Counter for check, is room empty or not? It looks like on PHPadmin:

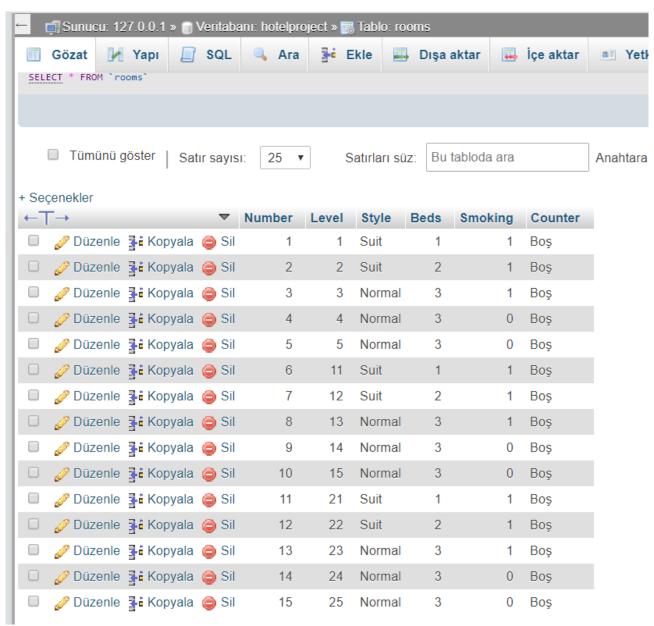

TABLE: rooms (picture 2)

```
adding= "INSERT INTO guests (Password,Fname,Lname,Email,Phone,Address)VALUES (123 4,'Berfin','Gokmen','berfin@gmail.com',1234,'Bolu')"
adding2= "INSERT INTO guests (Password,Fname,Lname,Email,Phone,Address) VALUES (1 23,'Bernur','Ancel','bernur@gmail.com',123,'Ankara')"
adding3= "INSERT INTO guests (Password,Fname,Lname,Email,Phone,Address)
VALUES (12378,'Büşra','Durak','busra@gmail.com',53300,'İstanbul')"
adding4= "INSERT INTO guests (Password,Fname,Lname,Email,Phone,Address)
VALUES (987, 'Yagmur','Demir',' yagmur@gmail.com', 0101,'Adana')"
```

```
adding5= "INSERT INTO guests (Password,Fname,Lname,Email,Phone,Address) VALUES (123 45,'Asile','Gerek','asile@gmail.com',12345,'Adana')" adding6= "INSERT INTO guests (Password,Fname,Lname,Email,Phone,Address) VALUES (123456, 'Merve','Bozkurt',' merve@gmail.com',2727,'Gaziantep')"
```

```
cursor = connection.cursor()
cursor.execute(adding)
cursor.execute(adding2)
cursor.execute(adding3)
cursor.execute(adding4)
cursor.execute(adding5)
cursor.execute(adding6)
```

On this part we add guests on our database. Our guests table has 7 entities. They are LoginID, Password, Fname, Lname, Email , Phone, Address. We use Auto Increment for LoginID.

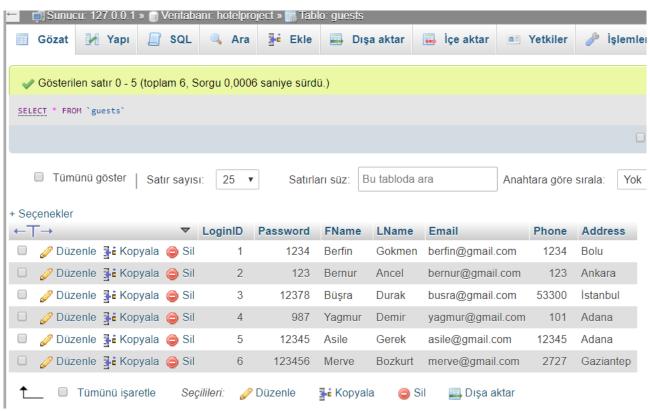

TABLE: Guests (picture 3)

```
adding= "INSERT INTO reservations (GuestID,RoomID,CheckIn,Checkout)

SELECT LoginID, Number, '2020-05-17', '2020-05-17'

From guests, rooms Where Email='berfin@gmail.com' and Number=1"
adding2= "INSERT INTO reservations (GuestID,RoomID,CheckIn,Checkout)

SELECT LoginID, Number, '2020-06-17', '2020-06-23'

From guests, rooms Where Email='bernur@gmail.com' and Number=2"
adding3= "INSERT INTO reservations (GuestID,RoomID,CheckIn,Checkout)

SELECT LoginID, Number, '2020-07-17', '2020-07-20'

From guests, rooms Where Email='busra@gmail.com' and Number=3"
```

```
adding4= "INSERT INTO reservations (GuestID,RoomID,CheckIn,Checkout)
            SELECT LoginID, Number, '2020-08-17', '2020-08-21'
     From guests,rooms Where Email='yagmur@gmail.com' and Number=4"
adding5= "INSERT INTO reservations (GuestID,RoomID,CheckIn,Checkout)
            SELECT LoginID, Number, '2020-09-17', '2020-09-18'
            From guests, rooms Where Email='asile@gmail.com' and Number=7"
adding6= "INSERT INTO reservations (GuestID,RoomID,CheckIn,Checkout)
            SELECT LoginID, Number, '2020-10-17', '2020-10-19'
            From guests, rooms Where Email='merve@gmail.com' and Number=6"
sorgu= "UPDATE rooms SET Counter = 'Dolu' Where Number = 1"
sorgu1="UPDATE rooms SET Counter = 'Dolu' Where Number = 2"
sorgu2="UPDATE rooms SET Counter = 'Dolu' Where Number = 3"
sorgu3="UPDATE rooms SET Counter = 'Dolu' Where Number = 4"
sorgu4="UPDATE rooms SET Counter = 'Dolu' Where Number = 6"
sorgu5="UPDATE rooms SET Counter = 'Dolu' Where Number = 7"
cursor = connection.cursor()
cursor.execute(adding)
cursor.execute(adding2)
cursor.execute(adding3)
cursor.execute(adding4)
cursor.execute(adding5)
cursor.execute(adding6)
cursor.execute(sorgu)
cursor.execute(sorgu1)
cursor.execute(sorgu2)
cursor.execute(sorgu3)
cursor.execute(sorgu4)
cursor.execute(sorgu5)
```

On this part we add reservations in our database. Our reservation table has 5 entities. They are ResNumber, CheckIb, CheckOut,GuestID,RoomID. We use Auto Increment for ResNumber.

For example; this code:

adding= ''INSERT INTO reservations (GuestID,RoomID,CheckIn,Checkout)

SELECT LoginID, Number, '2020-05-17', '2020-05-17'

From guests, rooms Where Email='berfin@gmail.com' and Number=1''

And this guest added to reservation table.

If we look into the working part of our program;

```
ROJECT/import.py
---- Welcome to Hotel Reservation System! -----
   -- Rezervasyon işlemi için giriş yapınız -----
      1-KAYIT OL
      2-GİRİS YAP
      3-ADMİN GİRİŞİ YAP
İşlem Seçiniz. 1
Ad: person1
Soyad: b
Email: person1@gmail.com
Parola: 000
Telefon: 111
Adres: 010101
Başarıyla kayıt oldunuz.
Kullanıcı Adı: person1@gmail.com Parola: 000
            GİRİŞ BİLGİLERİNİ GİRİNİZ.
Email: person1@gmail.com
Parola: 000
Hoşgeldiniz.
C:\Users\MONSTER\Desktop\Bernur\HOTELPROJECT>
```

When we run our program there will be 3 options:

- 1-KAYIT OL
- 2-GİRİŞ YAP
- 3-ADMİN GİRİŞİ YAP

We have designed a function to register guests and admin as kayit(). You can register to the system with option 1. In the guest table below, person1 has been registered.

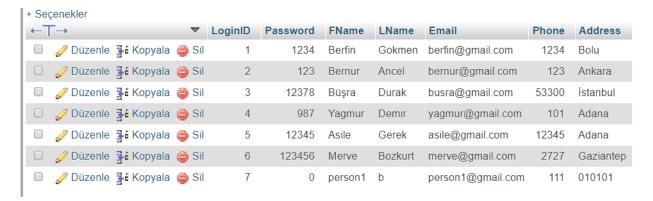

TABLE: GUESTS - ADD GUEST

After registering to the system, it is necessary to log in to see the empty rooms, make reservations or delete users.

To log in, 2. option should be selected. Then giris() function will run and log in will be successful.

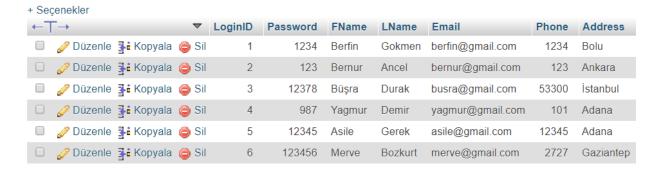

```
2-GİRİŞ YAP
3-ADMİN GİRİŞİ YAP
İşlem Seçiniz. 2
Email: person1@gmail.com
Parola: 000
Hosgeldiniz.
         3- ODA ARA VE REZERVASYON YAP
        4- ODADAN AYRIL
5- KULLANICI SİL
                BOS OLAN ODALARIMIZ
ODA NO: 5 DÜZEY: 5 STİL: Normal YATAK SAYISI: 3 SİGARA: 0 DURUM: Boş
ODA NO: 8 DÜZEY: 13 STİL: Normal YATAK SAYISI: 3 SİGARA: 1 DURUM: Boş
ODA NO: 9 DÜZEY: 14 STİL: Normal YATAK SAYISI: 3 SİGARA: 0 DURUM: Bos
ODA NO: 10 DÜZEY: 15 STİL: Normal YATAK SAYISI: 3 SİGARA: 0 DURUM: Boş
ODA NO: 11 DÜZEY: 21 STİL: Suit YATAK SAYISI: 1 SİGARA: 1 DURUM: BOŞ
ODA NO: 12 DÜZEY: 22 STİL: Suit YATAK SAYISI: 2 SİGARA: 1 DURUM: Boş

ODA NO: 15 DÜZEY: 25 STİL: Normal YATAK SAYISI: 3 SİGARA: 0 DURUM: Boş
Rezervasyon için oda numarası giriniz: 5
Onaylamak için kullanıcı adınızı giriniz: person1@gmail.com
Rezervasyon tamamlanmıştır
```

person1 has been logged in. Then there will be 3 options:

3-ODA ARA VE REZERVASYON YAP 4-ODADAN AYRIL 5-KULLANICI SİL

To make a room reservation, 3 should be selected. Then with odagoster() function the empty rooms will be shown. After that rezervasyonyap() function will be executed. Then, room number will be entered and reservation will be completed with email verification.

- If 4. option is selected, rezervasyonsil() funciton will be executed. The reservation will be deleted and the room will be empty again.
- If 5. option is selected, kullanicisil() function will be executed and the user will be deleted by entering the e-mail address of the guest you wish to delete.

If you want to admin login, then you should select option 3 when the program has been executed. If admin hasn't been registered, then it should be register first.(1.option)

- 1-KAYIT OL
- 2-GİRİŞ YAP
- 3-ADMİN GİRİŞİ YAP (admingirisiyap()function will be executed on this part.)

```
---- Welcome to Hotel Reservation System! ----
Rezervasyon işlemi için giriş yapınız ----
1-KAYIT OL
2-GİRİŞ YAP
3-ADMİN GİRİŞİ YAP

İşlem Seçiniz. 3
Admin kullanıcı adını giriniz: admin
Admin şifresini giriniz: 1234

1-Kullanıcı Sil
2-Oda Sil

Yapmak istediğiniz işlemi seçin:
```

After admin login, you have 2 option:

1-KULLANICI SİL 2-ODA SİL

If you want to delete a guest select 1 and kullanicisil() function will be run:

```
---- Welcome to Hotel Reservation System! ----
---- Rezervasyon işlemi için giriş yapınız -----
1-KAYIT OL
2-GİRİŞ YAP
3-ADMİN GİRİŞİ YAP

İşlem Seçiniz. 3
Admin kullanıcı adını giriniz: admin
Admin şifresini giriniz: 1234

1-Kullanıcı Sil
2-Oda Sil

Yapmak istediğiniz işlemi seçin: 1
Silmek istediğiniz işlemi seçin: 1
Silmek istediğiniz kullanıcının mail adresini giriniz: person1@gmail.com
Başarıyla silindi...

C:\Users\MONSTER\Desktop\Bernur\HOTELPROJECT>
```

Or you can select 2 if you want to delete a room then odasil() function will be run:

```
---- Welcome to Hotel Reservation System! ----
Rezervasyon işlemi için giriş yapınız ----
1-KAYIT OL
2-GİRİŞ YAP
3-ADMİN GİRİŞİ YAP

İşlem Seçiniz. 3
Admin kullanıcı adını giriniz: admin
Admin şifresini giriniz: 1234

1-Kullanıcı Sil
2-Oda Sil

Yapmak istediğiniz işlemi seçin: 2
Silmek istediğiniz odanın numarasını giriniz: 15
Başarıyla silindi...
```

A Foreign Key is a column or a combination of columns whose values match a Primary Key in a different table. The relationship between 2 tables matches the Primary Key in one of the tables with a Foreign Key in the second table.

These codes allow us to generate foreign keys.:

```
try:
    with connection.cursor() as cursor:

sorgu1="ALTER TABLE reservations ADD COLUMN RoomID INT"
    sorgu = "ALTER TABLE reservations ADD FOREIGN KEY (RoomID) REFERENCES
rooms(Number)"
    sorgu2 = "ALTER TABLE reservations ADD FOREIGN KEY (GuestID) REFERENCES
guests(LoginID)"
    cursor.execute(sorgu1)
    cursor.execute(sorgu)
    cursor.execute(sorgu2)
```

The keys that appear in gray are our foreign keys.

	#	Adı	Türü	Karşılaştırma	Öznitelikler	Boş	Varsayılan	Açıklamalar	Ekstra
